

Wright Homes × MojuMedia

Prepared for Derek Wright, CEO | Wright Homes, Draper UT

Anchored on the 2026 sales goal of 199 homes

Executive Summary

MojuMedia is a builder-focused marketing partner that delivers MojuCrew, an AI staffing platform built for homebuilders. Five integrated AI workers cover online sales counseling, lead lifecycle, reputation management, content production, and competitive research, plus hybrid AI-and-human ad management across Google, Meta, and retargeting. The platform integrates directly into Lasso, the CRM Wright is adopting, and surfaces a unified executive-grade dashboard across both systems.

For Wright, the math is concrete: a 24/7 AI sales counselor that responds in under five seconds, ad spend optimized continuously rather than audited quarterly, content velocity at AI scale, and real-time visibility from every dollar of marketing through to every dollar of revenue. Same investment as a traditional consultancy partnership. Materially different leverage.

Investment: \$3,950 per month at the recommended Growth tier, with a \$4,950 setup credited toward the first three months. Month-to-month or 12-month at 10% off. Media spend pass-through, no agency markup.

Path to start: a 30-day pilot with MojuChat live on the website, MojuContent producing ad and email creative, and a working Lasso integration. Wright sees real lead-response and conversion data before any longer commitment.

This engagement is the foundation. The same AI staffing model expands cleanly into any other area of Wright's business as opportunities surface, including post-sale customer experience, warranty and service follow-up, vendor and trade communication, and back-office workflows. The marketing engagement is where the ROI is fastest to prove; the runway from there is open.

The Funnel Challenge

Wright Homes is targeting 84% growth in homes sold (108 to 199) on a flat marketing budget. The funnel math behind that goal is straightforward: more leads, faster lead response, higher appointment-set rates, and a stronger appointment-to-sale conversion. The execution challenge is that humans don't scale linearly and ad spend isn't continuously optimized.

Wright is adopting Lasso as the CRM and email marketing platform. That's a solid foundation. MojuCrew is built to layer on top of Lasso, supplying the AI capability the CRM itself doesn't natively provide: a 24/7 sales

counselor, continuous ad-spend optimization, automated content velocity, reputation management, and competitive intelligence. The result is a stronger system than either tool standing alone.

This document lays out the partnership model, the funnel math, the investment structure, and the recommended next steps.

How MojuCrew Partners with Builders

MojuCrew is a modular AI-staffing platform. Each module fills a real business role, configured for Wright's specific funnel. Builder-aware, not generic e-commerce. The platform comes online in days, scales without re-hiring, and gets faster, cheaper, and smarter every month it runs.

1. Online Sales Counselor: MojuChat

- 24/7 AI sales counselor on the Wright website
- Sub-5-second response time on every inbound lead. Industry data: response within 5 minutes increases qualification roughly 100x vs. 30+ minutes.
- Qualifies leads, books appointments directly into the calendar, hands warm leads to the human sales team
- Unlimited concurrent conversations. No queueing, no after-hours drop-off, no PTO.
- Operates in English and Spanish out of the box

2. Lead Lifecycle and Lasso Integration: MojuCRM

- AI lead-scoring and lifecycle layer that runs on top of Lasso, not a competing CRM
- Every MojuChat conversation pushed into Lasso instantly via API, with full transcript, qualification status, and intent signals attached to the contact record
- Automated next-best-action: AI scores each lead, decides whether it needs SMS, email, or sales-team escalation, and triggers Lasso workflows accordingly
- Conversion data flows back from Lasso into MojuCrew dashboards so AI keeps learning from outcomes
- Wright keeps Lasso. MojuCrew makes Lasso perform.

3. Reputation and Reviews: MojuReviews

- Continuous monitoring of Google, Yelp, and Facebook reviews across every Wright community
- AI-drafted, brand-aligned responses for sales-leadership approval before publishing
- Automated review-request flow triggered at the right moment in the buyer journey

4. Content and Creative: MojuContent

- Ad copy, landing-page copy, social posts, blog content drafted at scale
- Consistent brand voice maintained across hundreds of variants for continuous A/B testing

- Designer in the loop for visual identity. AI handles the volume.

5. Market Research: MojuResearch

- Weekly competitor pricing, inventory, and incentive tracking (DR Horton, Lennar, Ivory, Edge Homes, etc.)
- Local-market trend insights as conditions shift
- C-suite summaries delivered for executive-grade visibility

6. Hybrid Ad Management: Google, Meta, Retargeting

- AI handles creative generation, A/B testing at high cadence, and bid optimization continuously
- Human strategist on top for budget allocation, audience strategy, and exec reporting
- Wright keeps full ownership of every ad account. No golden handcuffs, no data lock-in.

What Wright's Data Is Telling Us

Working from Wright's own Google Analytics, January through April 2026:

METRIC	JAN	FEB	MAR	APR	TREND
Site Users	18,824	16,081	11,053	10,241	-46%
Avg Engagement Time	52s	46s	1m 4s	1m 6s	+27%
Paid Social Users	4,180	3,443	1,485	1,650	-61%
Cross-Network	6,759	5,201	1,861	1,213	-82%
Organic Search	1,009	947	1,103	896	flat
Contact Forms Submitted	19	297	500	547	+2,778%
Phone Clicks	42	32	35	49	flat
Chat Sessions	14	13	8	11	0.1% of visitors
Offers Page Views	2,543	3,198	2,984	4,510	+77%
Custom Home Page Views	2,928	166	181	162	-94%, likely broken

The story this data tells:

1. **Top of funnel is shrinking, but quality is rising.** Site users dropped 46% in four months while engagement time went up 27%. Fewer visitors are coming, but the ones who arrive are more interested.

The structural problem is paid-channel decay: cross-network and paid social collapsed; organic stayed flat. Reallocation of media spend is the immediate priority.

2. **Lead capture mechanics are working better, but unevenly.** Contact form submissions grew 28x from January to April. Either the form was redesigned, measurement was fixed, or content drove a real conversion lift. That's a major bright spot. But chat is being used by only **0.1% of visitors** (11 sessions on 10,241 visitors in April). Phone clicks are similarly flat at 49/month. Most buyer engagement is being absorbed by **Agent Page Viewed (3,182 in April)**, meaning buyers route to individual agents, not into a brand-owned funnel where Wright captures and nurtures the relationship.
3. **The Custom Home page is broken or has been demoted.** Page views dropped 94% (2,928 to 162) between January and February and never recovered. This needs immediate investigation. For a builder with custom-home capability, that's a structural funnel leak.
4. **JT Single Family is the only community trending up** (3,592 to 3,886). Whatever's working there should be modeled and applied to the others.
5. **Buyers are price-sensitive.** Offers Page views grew 77% while community pages contracted. The market is asking for value; the funnel should answer with smart promotion content and dynamic offer messaging.

How AI Directly Addresses What's Happening

WRIGHT'S ACTUAL GAP	MOJUCREW RESPONSE
Chat used by 0.1% of visitors	MojuChat at sub-5-second response. Industry data: chat-engaged sessions convert 3 to 5x higher than no-chat. Realistic 30-day target: 5 to 8% chat engagement (50 to 80x current).
Site users down 46% in 4 months	Continuous AI ad-spend optimization across Google and Meta. Reallocate the \$5K/mo billboard plus a portion of print into the channels showing engagement lift. Target: stabilize by month 2, return to growth by month 3.
Buyers routed to individual agents (3,182 agent-page views)	MojuChat captures the buyer first, qualifies, books an appointment with the right agent. Wright owns the relationship; agents get warm hand-offs, not cold-called listings.
Custom Home page collapsed 94%	Day-one MojuResearch audit identifies the cause (UX, navigation, indexing) and MojuContent rebuilds the page with conversion-focused copy.
Phone clicks flat at ~45/mo	Click-to-call tracking integrated into MojuCRM. AI sales counselor follows up on every missed connection within minutes.
Offers Page surging	MojuContent generates dynamic offer-driven landing pages and social ads matched to current promotions. AI A/B tests headline, image, and CTA continuously.
Contact form 19 to 547 (working, but unmeasured downstream)	MojuCRM picks up every submission instantly, scores, routes, and runs automated multi-touch follow-up. Conversion data closes the loop back into the dashboard.

What That Means for the 199-Home Goal

At Wright's \$649K average sales price, 199 homes is approximately \$129M revenue, 84% growth over current. Conservative funnel math:

- Current ~30 leads/month, target ~100 leads/month (3.3x)
- Current 11% appointment-to-sale, target 17 to 20% (industry benchmark)
- Current 0.1% chat engagement, target 5%+ (capture quality leads earlier in the journey)
- Current \$0 paid third-party listings, add measured Zillow and Realtor.com spend (Wright's competitors are paying for top-of-listing position; the gap is real)

The biggest single lever is the **conversion rate**: doubling appointment-to-sale from 11% to 22% is worth approximately 50 additional homes per year on the same lead volume, roughly **\$32M in incremental revenue**. AI continuously optimizing the lead-response and follow-up chain is precisely how that gap closes.

Marketing Budget: Reality and Reallocation

Wright's 2026 budget is \$500K. At Wright's revenue scale, builder-industry benchmark is roughly 1% of revenue:

SALES VOLUME	ANNUAL REVENUE (AT \$649K ASP)	RECOMMENDED MARKETING BUDGET
108 (current)	~\$70M	~\$700K
135 (15% growth)	~\$87M	~\$870K
199 (Hajime goal)	~\$129M	~\$1.2M

The realistic conversation with Hajime starts with **reallocation, not a topline increase**. Real waste exists in the current \$500K spend. AI's first job is to find and reinvest it.

What reallocation looks like, identified from Wright's existing media plan and Q1 GA data:

- **Billboards: \$5,000/month, \$60K/year** with no measurable conversion attribution. AI continuous attribution would never have allocated this in the first place; reallocating it into digital channels alone funds material lift in lead volume.
- **Print spend** (~\$2,700/month) is likewise unattributable in a digital-first builder funnel. Strong candidate to redirect into Google Performance Max and Meta Advantage+.
- **No paid third-party listings** (\$0 on Zillow / Realtor.com paid placement). Wright's competitors are paying for top-of-listing position.
- **Cross-network spend collapsed 82% Jan to Apr.** Needs immediate audit. Either budget was pulled mid-quarter, audiences fatigued, or the channel structurally stopped working. AI flags this in real time, not at quarterly review.
- **Paid Social down 61%** while engagement time went up. Fewer visitors but more engaged. The audiences Paid Social IS reaching are the right ones; the problem is volume, not quality. Smart bid expansion can recover the volume without losing quality.

The headline argument: A continuously-optimizing AI doesn't audit waste once. It identifies inefficiency every hour, in real time, and reallocates the freed dollars into channels that convert.

That's roughly \$80 to \$90K per year of currently low-ROI spend that AI can redirect into proven-performance channels in the first 60 days of the partnership, before any conversation about increasing the topline budget.

Built to Layer on Lasso

Wright is adopting Lasso as the CRM and email marketing platform. MojuCrew is designed to integrate cleanly into that decision and amplify it. The integration is concrete:

- **MojuChat to Lasso:** every qualified lead from the AI sales counselor pushes into Lasso instantly via REST API, with conversation transcript, qualification answers, and intent score attached. Lasso is the system of record; MojuChat is the front door.
- **AI enrichment back to Lasso:** lead scores, next-best-action recommendations, predicted conversion probability, and engagement-channel preferences all written onto the Lasso contact record so the sales team works from one source of truth.
- **Lasso email marketing, AI-fueled:** MojuContent drafts subject lines, body copy, and full templates at scale across every community and segment. Lasso continues to handle the send and the deliverability infrastructure. Builders get content velocity without losing the CRM workflow they're already adopting.
- **MojuReviews to Lasso:** every review interaction tied back to the matching contact record, so Wright sees the full buyer journey including reputation touch-points.
- **Webhook-driven sync:** Lasso's webhooks notify MojuCrew of contact updates and stage changes; MojuCrew's AI re-evaluates and adjusts campaigns and follow-ups in real time.
- **Unified Hajime dashboard:** pulls from both Lasso (CRM, email engagement, contact lifecycle) and MojuCrew (AI activity, ad performance, content production) into a single executive view.

The result is one cohesive funnel. Lasso runs the rolodex and the email engine. MojuCrew runs the AI capability that makes the rolodex perform. Wright pays no separate AI software license, no integration consultancy fee, and no second CRM. The integration scope is included in the partnership.

Investment Levels

MojuCrew is a SaaS partnership built around AI cost-structure economics: AI workers are dramatically cheaper to operate than human consultants, and that delta passes through to Wright as included scope at a competitive headline price.

TIER	INVESTMENT	FOR
Foundation	\$1,950 / month	Builders <50 homes/year
Growth <i>(recommended for Wright)</i>	\$3,950 / month	100 to 199 home builders
Scale	\$5,950 / month	150+ homes / multi-site / premium reporting

Growth tier includes everything: - All 5 AI workers (MojuChat, MojuCRM, MojuReviews, MojuContent, MojuResearch) - Hybrid ad management across Google, Meta, retargeting - Full Lasso integration: API push,

AI enrichment writeback, email-template generation - executive-grade live reporting dashboards across Lasso and MojuCrew - Monthly strategy review with the founder - Quarterly business reviews

Add-ons (optional, project- or usage-priced): - Custom AI agent build for a Wright-specific workflow: \$5 to \$15K project - Dedicated strategist hours: \$200/hour - executive-grade reporting customization: project-priced - Sales-team training day on the AI tools: \$2,500/day

Setup: \$4,950 one-time. Includes Wright-specific platform configuration, Lasso integration build, sales-team onboarding, and the day-one ad-spend audit. Creditable toward the first 3 months of partnership.

Media spend: pass-through, no agency markup. Wright owns every ad account directly.

Term: month-to-month, OR 12-month at 10% off.

Year-2 steady-state: approximately \$3,450/month at the Growth tier. The platform gets more efficient over time, not more expensive.

What Wright Should Expect from the Partnership

From MojuCrew - Builder-specific platform configuration and full digital ad management - Full Lasso integration: lead push, AI enrichment writeback, email-template velocity, unified reporting - Live reporting dashboards built for executive and Hajime visibility, pulling from both Lasso and MojuCrew. Every lead, every appointment, every dollar of ad spend, every dollar of revenue, traceable to outcome. - 24/7 AI online sales counselor handling inbound at sub-5-second response time - Continuous ad-spend optimization. Waste identified and reallocated in real time. - Founder-led service. Monthly strategy review with Adam Lloyd, no agency-layer middlemen. - Quarterly business reviews and continuous performance optimization

From Wright Homes - A budget aligned to the 199-home goal. At minimum, reallocation of the \$5K/month billboard spend and a portion of print into digital channels (~\$80 to \$90K per year freed up immediately). - Internal alignment on the website becoming program-forward (lead capture into Lasso via MojuChat) rather than agent-forward - Sales team participation in the MojuChat handoff process. AI qualifies, humans close. - Honest feedback as the funnel data starts coming in - Commitment to act on the data the platform surfaces

Recommended Next Steps

Two paths forward, depending on how Wright wants to start.

Path A: 30-Day Pilot

- 30 days at the Foundation tier (\$1,950) running MojuChat live on Wright's website, leads piping straight into Lasso, MojuContent producing ad and email creative, and a baseline ad-spend audit delivered in

week one

- Wright sees real lead-response, real appointments booked, real conversion data before scaling commitment
- If Wright moves to Growth, the pilot fee credits forward

Best for: seeing the platform deliver against Wright's actual leads before committing 12 months.

Path B: Direct to 12-Month Growth Tier

- Skip the pilot, sign Growth at the 10%-off annual rate
- Setup (\$4,950) credits toward the first 3 months
- All AI workers live across the funnel within the first week
- Lasso integration complete and tested within the first 10 days
- executive-grade dashboards in front of the C-suite within the first month

Best for: moving toward the 199-home goal with minimal delay.

Immediate Action Items

- MojuCrew delivers a written proposal with full pricing transparency
- Aaron, Derek, and Adam schedule the next call to walk the math together
- Internal alignment with the controller and Hajime on the budget conversation. The math in this document is the case.

The Bottom Line

Wright Homes has the brand, the team, and the legacy to hit 199 homes in 2026. The funnel math is straightforward: more leads, faster response, better conversion, a measurable system, a marketing budget that matches the goal.

MojuCrew delivers all of it through AI workers operating end-to-end across the funnel and integrated tightly into Lasso. Structural advantages a traditional consultancy can't replicate: 24/7 instant response, continuous ad-spend optimization, AI enrichment on every Lasso contact, content velocity at AI scale, and a single dashboard surface for executive and Hajime visibility.

The next call is the one where Aaron, Derek, and Adam walk the math together and decide on the path forward.

Prepared by MojuMedia LLC. MojuCrew is the AI staffing platform MojuMedia delivers to its partners. Founder: Adam Lloyd. Disclosure: Aaron Lloyd, Director of Sales at Wright Homes, is the brother of Adam Lloyd. The relationship is disclosed up front; this proposal stands on the math and the capability, not on family.
